Revit Architecture 2013 crear y editar familias es una habilidad fundamental para arquitectos, ingenieros y diseñadores que desean personalizar sus proyectos y optimizar su flujo de trabajo. Las familias en Revit son componentes reutilizables que representan objetos arquitectónicos, como puertas, ventanas, mobiliario, luminarias y elementos personalizados que no se encuentran en las bibliotecas predeterminadas. Dominar la creación y edición de familias permite adaptar los modelos a necesidades específicas, mejorar la precisión y facilitar futuras modificaciones en los proyectos.

¿Qué son las Familias en Revit?

Definición y Función de las Familias

En Revit, una familia es un conjunto de elementos que comparten características similares, que pueden ser cargados y colocados en diferentes proyectos. Estas familias contienen información paramétrica que permite su modificación y adaptación según las dimensiones, materiales u otras propiedades que se deseen personalizar.

Las familias se clasifican en varios tipos:

- **Familias de sistema:** Incluyen elementos integrados en el proyecto, como muros, suelos, techos y escaleras. Estas no se crean ni editan en el entorno de familia, sino que se modifican mediante sus propiedades.
- **Familias loadable:** Son componentes que se crean y editan en archivos separados (.rfa) y se cargan en el proyecto cuando se necesitan. La mayoría de los objetos personalizados, como puertas, ventanas, mobiliario y accesorios, pertenecen a esta categoría.

Importancia de Crear y Editar Familias en Revit 2013

Personalizar las familias en Revit 2013 permite a los profesionales:

- Eficiencia: Reducen el tiempo en la creación de modelos, ya que los componentes predefinidos se pueden reutilizar y modificar según sea necesario.
- Precisión: Al ser paramétricas, las familias aseguran que los objetos tengan dimensiones y características precisas, facilitando cálculos y análisis.

Tipos de Familias en Revit 2013

Revit distingue varias categorías de familias, cada una adaptada a diferentes usos y niveles de detalle:

Familias de Modelo

Son componentes que participan en el modelo 3D y en las vistas de documentación, como puertas, ventanas, mobiliario y elementos estructurales.

Familias de Anotación

Incluyen símbolos, etiquetas y componentes que sirven para agregar información y detalles en las vistas, como etiquetas de puertas, cotas y símbolos gráficos.

Familias de Carga (Loaded Families)

Son familias que se cargan en el proyecto y se usan en múltiples lugares, como mobiliario o elementos decorativos.

Familias de Sistema

Son componentes integrados en Revit, como muros, techos y suelos, que no se crean ni editan como familias independientes.

Creación de Familias en Revit Architecture 2013

Crear una familia en Revit 2013 puede parecer una tarea desafiante para los nuevos usuarios, pero con un enfoque estructurado, se convierte en un proceso intuitivo y eficiente. A continuación, se detalla paso a paso cómo crear una familia desde cero.

Preparación y Planeación

Antes de comenzar, define claramente qué tipo de familia necesitas, sus dimensiones, parámetros y uso previsto. Tener un boceto o referencia gráfica facilitará el proceso.

Iniciar un Nuevo Archivo de Familia

- Abre Revit y selecciona la opción Archivo > Nuevo > Familia.
- Elige una plantilla adecuada para tu familia, por ejemplo, "Puerta.rft" para puertas o "Mobiliario.rft" para mobiliario.
- La plantilla proporciona un entorno preconfigurado con las categorías y parámetros necesarios.

Modelado Geométrico

- Utiliza las herramientas de modelado en 3D y en vista frontal, como:
- Líneas (Line): para definir perfiles.
- Extrusión (Extrusion): para crear formas 3D basadas en perfiles.
- Revolución (Revolve): para objetos rotacionales.

- Operaciones booleanas: unión, sustracción y intersección para combinar o cortar geometrías.

- Es recomendable trabajar en vistas 2D (planta, elevación) para definir la forma y en vistas 3D para verificar el resultado.

Agregar Parámetros y Control

- Inserta parámetros para definir dimensiones y características que puedan ser editadas posteriormente sin modificar la geometría.

- Para agregar un parámetro:

- Selecciona la geometría o línea.

- En la barra de propiedades, haz clic en el botón Agregar Parámetro.

- Define el nombre, tipo (longitud, número, texto) y otros atributos.

- Los parámetros permiten crear familias altamente flexibles y adaptables a diferentes necesidades de diseño.

Configuración de Categorías y Subcategorías

- Asigna la familia a la categoría correspondiente (por ejemplo, Puertas, Mobiliario).

- Define subcategorías para mejorar la organización y la visualización en el proyecto.

Guardar y Cargar la Familia

- Una vez finalizado el diseño y la configuración, guarda la familia en tu biblioteca o carpeta de proyectos.

- Para usar en un proyecto, carga la familia mediante Cargar en Proyecto o arrástrala directamente en la vista del proyecto.

Editar Familias Existentes en Revit Architecture 2013

Editar una familia existente en Revit requiere abrirla en modo de edición y realizar los cambios necesarios, manteniendo la integridad de los parámetros y geometría.

Procedimiento para Editar Familias

- Desde el navegador de proyectos, localiza la familia que deseas editar.
