- Balance of Payments (BOP) Theory: Focuses on the systemic flows of international transactions and their impact on currency stability.
- Portfolio and Asset Pricing Theories: Such as the Capital Asset Pricing Model (CAPM) and Arbitrage Pricing Theory (APT), adapted for cross-border investments.

Sercu emphasizes that these theories, while foundational, often rest on idealized assumptions that do not hold in practice. Therefore, he advocates for their contextual adaptation.

Limitations of Classical Theories

Classical models often assume:

- Perfect capital mobility
- No transaction costs
- Rational expectations
- Stable political environments

Sercu highlights that these assumptions rarely hold in international contexts, especially given factors like capital controls, political risk, and market imperfections. His approach involves modifying these theories to incorporate such real-world frictions.
