Sample Weather Comprehension Passage for Fifth Grade

Below is a sample passage designed to illustrate what effective weather comprehension passages look like.

Understanding Clouds and Weather

Have you ever looked up at the sky and noticed different types of clouds? Clouds are an important part of our weather system. They are made up of tiny water droplets or ice crystals that float in the sky. Depending on their shape and height, clouds can tell us a lot about the weather to come.

There are many types of clouds, but the main ones are cirrus, cumulus, stratus, and nimbus clouds. Cirrus clouds are thin and wispy, often appearing high in the sky. They usually indicate that the weather will stay the same or improve. Cumulus clouds are puffy and white, often seen during sunny days; they can sometimes grow into thunderstorms. Stratus clouds form in layers and can cover the sky like a blanket, bringing overcast skies and light rain. Nimbus clouds are dark and heavy, bringing heavy rain, thunderstorms, or snow.

Weather forecasters study these clouds to predict upcoming weather conditions. For example, an increase in dark nimbus clouds might mean a storm is approaching. By observing clouds, we can learn to anticipate changes in the weather and prepare accordingly.

Questions:

- What are the main types of clouds mentioned in the passage?
- How do cirrus clouds usually indicate the weather will change?
- Why do weather forecasters study clouds?
- Describe the difference between cumulus and stratus clouds.
- What type of cloud is associated with heavy rain or storms?

This passage not only introduces students to cloud types but also encourages them to think about weather prediction and observation skills.
