Common Problems and Solutions in Wiley Plus Chapter 4

Many students encounter similar challenges while working through Wiley Plus problems in Chapter

4. Here's a breakdown of typical questions and detailed solutions.

1. Recognizing Revenue at the Correct Point

Problem: A company delivers goods to a customer on March 15, but the payment is not received until April 10. When should the revenue be recognized?

Answer:

Under the revenue recognition principle, revenue should be recognized when it is earned and realizable, typically at the point of delivery if the risks and rewards transfer to the buyer.

In this case:

- Revenue is recognized on March 15, the delivery date, assuming the company has transferred control of the goods.
- The cash receipt on April 10 does not affect the recognition date but is recorded as accounts receivable until payment is received.

Wiley Plus Tips:

- Understand the criteria for revenue recognition under ASC 606.
- Recognize revenue when control passes, not necessarily when cash is received.

2. Calculating Allowance for Doubtful Accounts

Problem: A company has Accounts Receivable totaling \$500,000. Based on historical data, 2% of receivables are uncollectible. What is the journal entry to record the allowance?

Answer:

- Calculate the allowance: $2\% \text{ of } \$500,000 = \$10,000$
- Journal Entry:
 - Debit: Bad Debt Expense \$10,000
 - Credit: Allowance for Doubtful Accounts \$10,000

Wiley Plus Explanation:

- The allowance method estimates uncollectible accounts, matching expenses with revenues.
- This approach adheres to the matching principle and provides a realistic view of receivables' net realizable value.

3. Valuing Notes Receivable and Interest

Problem: A company holds a \$10,000, 6-month note with a 5% annual interest rate issued on January 1. What is the amount to be recorded on the balance sheet at inception? What interest revenue will be recognized at the end of six months?

Answer:

- At inception:
 - Notes receivable recorded at face value: \$10,000
 - Interest calculation:
 - Interest = Principal $\times$ Rate $\times$ Time
 - Interest = $\$10,000 \times 5\% \times (6/12) = \250
- At the end of six months:
 - The interest revenue recognized is \$250, and the total amount receivable is \$10,250 (principal + interest).

Wiley Plus Tip:

- For notes, record the face value at inception.
- Recognize interest revenue periodically based on the effective interest method or straight-line method, depending on the context.
