Understanding Arithmetic and Geometric Sequences

What Are Arithmetic Sequences?

An arithmetic sequence is a list of numbers where each term is obtained by adding a fixed number, called the common difference, to the previous term. The general form of an arithmetic sequence is:

$$a_n = a_1 + (n - 1)d$$

where:

- n is the term number.

Example:

Sequence: 3, 7, 11, 15, 19, ...

- First term ($a_1 = 3$)
- Common difference ($d = 4$)

What Are Geometric Sequences?

A geometric sequence is a list of numbers where each term is obtained by multiplying the previous term by a fixed number called the common ratio. The general form is:

$$a_n = a_1 \times r^{n-1}$$

where:

- a_n is the n th term,
- a_1 is the first term,
- r is the common ratio,
- n is the term number.

Example:

Sequence: 2, 6, 18, 54, 162, ...
