- Oil Ports and Fittings

Function: Provide access points for adding or replenishing oil in bearing and gear housings.

Maintenance Tips:

- Use a clean, recommended oil type.
- Regularly inspect for leaks or blockage.
- Keep ports clean and free of debris.

Carriage and Cross-slide Mechanisms

- Carriage and Saddle Ways

Function: Enable smooth movement of the carriage along the bed, supporting cutting operations.

Lubrication Type: Light machine oil or way oil, such as ISO VG 22.

Maintenance Tips:

- Apply oil to the ways after cleaning to prevent rust and ensure smooth motion.
- Use a brush or oil can to apply an even coat.
- Wipe away excess oil to prevent dirt accumulation.

- Cross-slide and Compound Slide

Function: Allow precise lateral and angular adjustments during machining.

Lubrication Tips:

- Regularly lubricate the sliding surfaces with way oil.
- Avoid over-lubrication to prevent dirt buildup.
- Periodically remove old oil and dirt, then reapply fresh lubricant.

Lead Screws and Bedways

- Lead Screws (e.g., Feed Rod and Threading Screws)

Function: Transmit power for longitudinal and cross feeds.

Lubrication Type: Use a high-quality screw oil or grease, such as lithium-based grease or specialized screw lubricants.

Maintenance Tips:

- Apply lubricant along the entire length of the screw.
- Turn the screw by hand periodically to distribute lubricant evenly.
- Clean old grease or dirt before applying fresh lubricant.

- Bedways

Function: Provide a guide surface for the carriage and tailstock.

Lubrication Tips:

- Use a thin film of way oil or light machine oil.
- Regularly inspect for signs of rust or wear.
- Keep the ways clean and free of chips and debris.

Feed and Gearbox Systems

- Feed Mechanism Gears and Chains

Function: Control automatic feed movements.

Lubrication Type: Gear oil or grease suitable for the specific component.

Maintenance Tips:

- Check for proper lubrication during routine inspections.
- Lubricate chains with appropriate chain lubricant.
- Replace worn or damaged components as needed.

- Gearbox Lubrication

Function: Provide smooth and reliable operation of the gear changing mechanism.

Lubrication Tips:

- Drain and refill gearbox oil according to the maintenance schedule.
- Use manufacturer-recommended oil grades.
- Keep the gearbox lid sealed to prevent contamination.

Additional Lubrication Points and Tips

- Chuck and Tool Holders: Occasionally lubricate to prevent rust; use light oil or rust inhibitors.
- Tailstock Quill and Bearings: Keep these components properly lubricated to ensure smooth movement.
- Electrical and Hydraulic Components: Avoid direct lubrication; keep clean and inspect for leaks or damage.

Maintenance Schedule and Best Practices

| Frequency | Tasks |

|-----|-----|

| Daily | Wipe down exposed surfaces, check oil levels, apply light oil to ways and sliding surfaces. |

| Weekly | Inspect and clean lubrication points, apply fresh lubricant as needed. |

| Monthly | Change gearbox and spindle oils, inspect for wear or damage. |

| Annually | Complete thorough inspection, replace worn parts, and perform full lubrication overhaul. |

Best practices for lubrication include:

- Using only recommended lubricants specified in the Nardini 1440 manual.
- Keeping all lubrication tools clean to prevent contamination.
- Applying lubricants evenly and avoiding excess, which can attract dirt.

- Monitoring for leaks or signs of wear and addressing issues promptly.
