Historical Perspectives

Early studies focused on descriptive growth patterns, but advances in imaging technology and morphometric analysis have allowed for quantitative assessments. Prominent figures such as Broadbent, Bjork, and Enlow laid foundations for understanding growth mechanisms, which continue to evolve with ongoing research.

Fundamental Concepts of Craniofacial Growth

Growth Centers and Growth Sites

Understanding where and how growth occurs is fundamental. These are classified as:

- **Growth Centers:** Specific areas with active proliferation of cells, such as the condyles, sutures, and alveolar processes.
- **Growth Sites:** Regions where growth manifests through remodeling; often correspond to sutures and periosteal areas.

Types of Growth

The textbook delineates growth into various types:

- **Appositional Growth:** Increase in bone thickness via surface deposition.
- **Interstitial Growth:** Lengthening of bones through proliferation within cartilage or growth plates.
- **Surface Remodeling:** Continuous resorption and deposition reshaping bones.

Growth Patterns and Directions

Growth can be:

- **Vertical:** Increase in height, especially of the maxilla and mandible.
- **Transverse:** Width expansion, such as widening of the palate.
- **Anteroposterior:** Forward or backward development of facial structures.

Stages of Craniofacial Development

Embryonic and Fetal Periods
