Types of Ceramic Tiles

Based on the classification, the standard delineates various tile types:

- Type 1: Vitrified tiles
 - Characteristics: Low water absorption ()
 - Applications: Commercial flooring, exterior paving
- Type 2: Semi-vitrified tiles
 - Characteristics: Moderate water absorption (0.5%-3%), medium strength
 - Applications: Interior flooring and walls
- Type 3: Non-vitrified tiles
 - Characteristics: Higher porosity, less durable
 - Applications: Decorative wall tiles, indoor use
- Type 4: Glazed tiles
 - Features: Surface coated with glaze for aesthetic appeal
- Type 5: Unglazed tiles

- Features: Raw surface, often slip-resistant

Classification Codes

The standard assigns classification codes that help in product identification, such as:

- F for Floor tiles
- W for Wall tiles
- V for Vitrified
- NV for Non-vitrified
- G for Glazed
- UG for Unglazed

For example, a vitrified glazed floor tile might be classified as F-V-G.
