Title

The Impact of Social Media on Academic Performance Among Undergraduate Students: A Case Study at Harvard University

Abstract

This study investigates the influence of social media usage on the academic performance of

undergraduate students at Harvard University. Employing a mixed-methods approach, the research combines quantitative surveys with qualitative interviews to explore correlations and underlying factors. Findings aim to inform university policies on digital media engagement and student well-being. The project is expected to span six months, with a proposed budget of \$5,000 to cover survey tools and transcription services.

Introduction and Background

In recent years, social media platforms have become integral to students' daily lives, offering both opportunities and challenges. While these platforms facilitate communication and information sharing, concerns have arisen regarding their impact on academic focus and performance. Harvard students, known for their rigorous academic environment, are not immune to these influences. Previous research indicates mixed results, with some studies suggesting social media can distract students, while others highlight potential benefits for collaborative learning. Despite this, there remains a significant gap in understanding how social media usage specifically affects Harvard undergraduates' academic outcomes.

Research Questions

- How does social media usage correlate with academic performance among Harvard undergraduates?
- What are students' perceptions of social media's impact on their studies?
