Sample Questions and Answers for N5 Mathematics

Sample Question 1: Algebra

Question: Simplify the expression: $3(2x + 5) - 4(x - 2)$

Answer:

Step 1: Expand brackets:

$$3(2x + 5) = 6x + 15$$

$$-4(x - 2) = -4x + 8$$

Step 2: Combine like terms:

$$6x + 15 - 4x + 8 = (6x - 4x) + (15 + 8) = 2x + 23$$

Final Answer: $2x + 23$

Sample Question 2: Geometry

Question: A triangle has angles of 50° and 60° . Find the third angle.

Answer:

$$\text{Sum of angles in a triangle} = 180^\circ$$

$$\text{Third angle} = 180^\circ - (50^\circ + 60^\circ) = 180^\circ - 110^\circ = 70^\circ$$

Final Answer: 70°

Sample Question 3: Data Handling

Question: The table below shows the number of students in different classes:

Class	Number of Students
-------	--------------------

1	25
---	----

2	30
---	----

3	20
---	----

4	25
---	----

Calculate the mean number of students per class.

Answer:

Total students = $25 + 30 + 20 + 25 = 100$

Number of classes = 4

Mean = Total students / Number of classes = $100 / 4 = 25$
