Below, we analyze common themes and interpretative challenges that such activities typically encompass.

Question 1: How do leading indicators predict economic activity?

Leading indicators are designed to signal future economic trends. For example, an uptick in building permits suggests increased construction activity, which often precedes growth in employment and production. Similarly, rising stock markets can reflect investor confidence and expectations of future profits.

Key points:

Limitations:

- Leading indicators can sometimes give false positives or negatives.
- External shocks or policy changes can distort their signals.

Question 2: What is the significance of lagging indicators?

Lagging indicators confirm trends identified by other measures. For example, the unemployment rate typically remains high after a recession has ended, serving as a confirmation of economic recovery.

Key points:
