Example of an Engineering Research Proposal

Below is a sample proposal on a hypothetical research project related to sustainable materials in

civil engineering.

Title

Development of Recycled Plastic-Concrete Composites for Sustainable Infrastructure

Abstract

This research aims to develop and evaluate novel concrete composites reinforced with recycled plastics to promote sustainable construction practices. By integrating plastic waste into traditional concrete, the project seeks to enhance material properties, reduce environmental impact, and provide cost-effective solutions for infrastructure development. The study will involve material characterization, mechanical testing, durability assessment, and environmental analysis. Expected outcomes include optimized composite formulations and guidelines for practical application, contributing to sustainable engineering and waste management strategies.

Introduction and Background

With increasing urbanization and environmental concerns, the construction industry faces the challenge of reducing its ecological footprint. Plastic waste accumulation presents a significant environmental problem, and innovative solutions are needed to repurpose this material effectively. Previous studies have explored incorporating recycled plastics into construction materials, but challenges remain regarding bonding, strength, and durability. This research seeks to bridge these gaps by developing concrete composites reinforced with recycled plastics, aiming to produce sustainable, high-performance building materials.

Problem Statement

Traditional concrete production is resource-intensive and environmentally damaging. Incorporating recycled plastics may weaken structural integrity if not properly engineered. The challenge is to develop a composite material that maintains or improves mechanical properties while offering environmental benefits.

Objectives and Research Questions

Objectives:

- To formulate concrete composites reinforced with different types and proportions of recycled plastics.
- To evaluate the mechanical, durability, and environmental properties of these composites.

- To identify optimal formulations for structural applications.

Research Questions:

- How does recycled plastic content affect the compressive and tensile strength of concrete?
- What are the effects on durability factors such as permeability, freeze-thaw resistance, and chemical resistance?
- Can these composites meet industry standards for structural use?

Significance and Innovation

This research contributes to sustainable construction by providing a practical method to reuse plastic waste, reducing landfill burden and conserving natural resources. Innovatively, it explores novel composite formulations and comprehensive testing protocols that could lead to industry adoption.

Literature Review

Existing research indicates that incorporating plastics can improve certain properties but often compromises strength and durability. Studies by Smith et al. (2020) demonstrated potential in using PET bottles, while Lee and Kim (2019) highlighted bonding challenges. Gaps remain in understanding long-term durability and scaling up production, which this research aims to address.

Methodology

- Material Selection: sourcing recycled plastics (PET, HDPE) and standard cement and aggregates.
- Composite Preparation: mixing ratios will vary, with plastic content from 5% to 20% by volume.
- Testing Procedures:
 - Mechanical tests: compressive and tensile strength per ASTM standards.
 - Durability tests: permeability, freeze-thaw cycles, chemical resistance.
 - Microstructural analysis: SEM imaging to assess bonding.
- Data Analysis: statistical methods to determine optimal formulations and correlations between plastic content and properties.

Expected Outcomes and Impact

- Identification of composite formulations with acceptable strength and durability.

- Development of guidelines for integrating recycled plastics into concrete.
- Contribution to sustainable engineering practices and waste management policies.
- Potential for industry adoption, leading to greener infrastructure solutions.
