Sample Questions and Marking Criteria

To better grasp how the mark scheme functions, we examine typical questions from the 2012 Physics GCSE exam along with their marking criteria.

Example 1: Calculating Speed

Question:

A car travels 150 km in 3 hours. Calculate its average speed in km/h.

Mark scheme approach:

- Correct formula: $\text{speed} = \text{distance} / \text{time}$
- Correct substitution: $150 \text{ km} / 3 \text{ hours}$
- Correct answer: 50 km/h

Example 2: Explaining Physical Concepts

Question:

Explain why a metal wire expands when heated.

Mark scheme criteria:

- Mention of increased kinetic energy of particles
- Explanation that particles move further apart as temperature increases
- Reference to thermal expansion

Sample answer for full marks:

"When a metal wire is heated, the particles gain kinetic energy and vibrate more vigorously. This increased movement causes the particles to occupy more space, resulting in the wire expanding."

Partial marks:

- Mentioning particles but not explaining movement or expansion
- Failing to connect kinetic energy to expansion

Strategies for Maximizing Marks Based on the Mark Scheme
