What Are Playground Exofictions?

Defining the Concept

Playground exofictions are hybrid environments where physical playgrounds serve as the canvas for layered, narrative-rich experiences that extend into digital or augmented realms. Unlike traditional playgrounds, which focus solely on physical activity and social play, exofictions introduce a storytelling dimension that invites participants to become active protagonists within a constructed universe. These environments are exofictive, meaning they exist beyond the confines of a single medium or narrative, often integrating various forms of media, physical structures, and interactive technologies.

Origins and Evolution

The genesis of playground exofictions can be traced to broader trends in augmented reality (AR), gamification, and experiential learning. Early experiments in combining physical play with digital overlays, such as AR treasure hunts or interactive murals, set the stage for more sophisticated implementations. Over the past decade, advancements in AR glasses, mobile apps, and sensor technology have enabled designers to craft complex, multi-layered narratives embedded within physical spaces. Today, playground exofictions are not just about digital augmentation but about creating integrated environments that stimulate imagination, foster community, and promote learning.

Core Elements of Playground Exofictions

Physical Design and Spatial Layout

At the heart of any playground exofiction is its physical design. Architects and designers craft playgrounds that serve as storytelling platforms, incorporating elements such as:

- Themed structures (castles, spaceships, forests)
- Interactive installations with sensors
- Modular components that can be rearranged
- Safe zones for narrative interactions

These physical features are purposefully designed to act as anchors for digital overlays and

narrative cues, guiding participants through the story.

Digital and Augmented Reality Components

Augmentation is critical in transforming physical spaces into exofictive worlds. Technologies employed include:

- AR Applications: Mobile apps or AR glasses that overlay digital characters, objects, and effects onto the physical environment.
- Interactive Screens: Touchscreens or projection-based interfaces that respond to user input.
- Sensor Networks: Collect data on user movements and interactions to trigger narrative events or environmental changes.

These digital layers enable immersive storytelling, where users might discover hidden clues, animate figures, or manipulate virtual objects within the physical playground.

Narrative Structures and Storytelling

At the core of any exofiction is a compelling narrative. Designers develop stories that:

- Are adaptable to different age groups
- Encourage exploration and problem-solving
- Promote social interaction and teamwork

Stories are often designed as ongoing adventures, with multiple pathways and outcomes, allowing repeat engagement and personalized experiences.

User Participation and Co-Creation
