Question:

Which of the following is the primary purpose of performing an information systems audit?

A) To identify vulnerabilities in the network infrastructure

B) To evaluate the adequacy of controls and compliance with policies

C) To implement new security measures

D) To train staff on security awareness

Correct Answer: B) To evaluate the adequacy of controls and compliance with policies

Explanation:

The primary purpose of an information systems audit is to assess whether controls are adequate and functioning effectively, and whether the organization complies with relevant policies, standards, and regulations. While identifying vulnerabilities (A) and training staff (D) are important activities within an overall security program, they are not the core objectives of an audit. Implementing new security measures (C) is a management action that may follow audit findings but is not the purpose of conducting the audit itself.

This question exemplifies how review questions test understanding of fundamental concepts and their application.
