Foundational Concepts in Electromagnetic Field Theory

The Nature of Electric and Magnetic Fields

At its core, electromagnetic field theory describes how electric charges and currents produce fields that influence their surroundings. These fields are vector quantities, characterized by both magnitude and direction.

- Electric Fields (E): Generated by static or moving electric charges, influencing other charges within their reach.
- Magnetic Fields (H): Produced by moving charges (currents), magnetic dipoles, and changing electric fields.

Sadiku emphasizes the differential and integral formulations of Maxwell's equations, providing a comprehensive framework for analyzing fields in various media.

Maxwell's Equations: The Heart of Electromagnetism
