## Understanding Higher Order Thinking in Kindergarten

### What is Higher Order Thinking?

Higher order thinking refers to the cognitive processes that involve analysis, evaluation, synthesis, and creation. Unlike lower-order thinking skills such as remembering and understanding, higher order thinking challenges students to engage in complex thought processes. For kindergarteners, this means moving beyond simply recalling facts to applying knowledge, making connections, and generating new ideas.

### Why is Higher Order Thinking Important for Young Children?

Developing higher order thinking skills at an early age has numerous benefits:

- Enhances problem-solving abilities
- Fosters creativity and innovation
- Builds critical thinking skills necessary for academic success
- Encourages curiosity and a love for learning
- Prepares children for more complex cognitive tasks in later grades

## Characteristics of Effective Higher Order Thinking Question Stems for Kindergarten

To be effective, question stems should be age-appropriate, clear, and engaging. They should prompt children to analyze, evaluate, or create rather than merely recall information. Effective question stems for kindergarten typically:

- Are simple and concise
- Use familiar language
- Encourage reasoning and explanation
- Promote open-ended responses
- Stimulate curiosity and imagination

## Categories of Higher Order Thinking Question Stems for Kindergarten

### Analyzing Questions

These question stems prompt children to examine parts of a whole, identify relationships, or compare items.

Examples:

- "What do you notice about these two objects?"
- "Why do you think this happened?"
- "Can you find the differences between these two pictures?"
- "What is the same about these two stories?"

### Evaluating Questions

Evaluating questions help children make judgments based on criteria or evidence.

Examples:

- "Which activity did you enjoy the most? Why?"
- "Do you think this story is happy or sad? Why?"
- "Which picture shows the best way to solve this problem?"
- "Is this the right way to do it? Why or why not?"

### Creating Questions

Creating questions challenge children to generate new ideas, stories, or solutions.

Examples:

- "Can you make up a new ending for this story?"
- "How would you solve this problem using your own idea?"
- "Can you design a new game using these materials?"
- "What could happen next in this story?"

## Applying Questions

Application questions encourage children to use their knowledge in new situations.

Examples:

- "How can you use these blocks to build a house?"

Have children think about a question individually, discuss with a partner, then share with the class. This process promotes critical thinking and communication skills.

## 6. Integrate Questions into Play and Exploration

Use play-based activities to pose higher order questions. For example, during a building activity, ask, "What could you build next? Why?"
